

Hydrogen Americas 2026 Heads to Houston, Marking a New Chapter for the Region's Hydrogen Market

Houston, Texas will host the **Hydrogen Americas Summit & Exhibition 2026**, marking an important new chapter for the event and reflecting the growing strategic importance of the Gulf Coast in shaping the future of hydrogen development across the Americas.

Taking place on 6-7 October 2026 at the George R. Brown Convention Center, the Summit will bring together policymakers, investors, project developers, technology providers and industrial leaders at the heart of the U.S. energy industry. The move to Houston positions the event closer to the infrastructure, capital, industrial demand centres and export gateways that are expected to define the next phase of market development.

As the hydrogen sector enters a more commercially disciplined era, Hydrogen Americas 2026 will focus on the realities shaping project progress and investment decisions across the region. The 2026 agenda will examine the new policy landscape in the United States, the role of low-carbon hydrogen and CCUS on the Gulf Coast, the outlook for trade and export corridors, project bankability, demand creation in refining, ammonia and fertilisers, and the emerging role of hydrogen in fuels, power and heavy-duty transport.

Across two days, senior leaders from government, industry and finance will explore how evolving policy frameworks, changing market conditions and growing priorities around energy security, industrial competitiveness and resilience are reshaping the hydrogen opportunity across the Americas.

Catalina Zuliani, Conference Manager, Hydrogen Americas Summit & Exhibition, said:

“Houston is the right home for the next chapter of Hydrogen Americas because it sits at the centre of the infrastructure, industry and investment conversations shaping the market today. As the sector moves from ambition to a more commercial phase, Hydrogen Americas 2026 will focus on the strategic questions that matter most: which projects are still moving, where real demand is emerging, how buyers and export markets are evolving, and what it will take to build a stronger hydrogen market across the Americas.”

Registration and further event information are available at: www.world-hydrogen-summit.com/americas

Among confirmed participants are senior representatives from the World Bank, Japan Bank for International Cooperation, Linde, Bosch, Utility Global, Port of Corpus Christi, Kawasaki Gas Turbine Europe, the Global CCS Institute, OPIS, FCHCA and Aternium. Together, they will bring perspectives spanning policy, finance, infrastructure, technology, project development and industrial demand - creating a commercially focused conversation about what it will take to move viable projects forward.

About Hydrogen Americas Summit & Exhibition

The **Hydrogen Americas Summit & Exhibition** is a leading gathering for the hydrogen and wider energy community across the Americas. The event brings together senior policymakers, investors, developers, industrial end users, technology providers and infrastructure leaders to examine the commercial, policy and strategic priorities shaping hydrogen market development

across the region. Alongside the strategic summit, the exhibition showcases the latest technologies and solutions across hydrogen production, storage, infrastructure, mobility, CCUS and industrial decarbonisation.
